

Orteg 1400d delaminator

removing graphics fast and easy

The Orteg 1400d is an indispensable aid to remove laminates from panels.

The operator feeds the panel into the machine, peels the first rim of film, and the rest of the panel is cleared by the machine.

The removed film is rolled on the take-up cylinder. Once full, the take-up cylinder can be removed in a simple operation.

Clearing the take-up cylinder is extremely efficient thanks to the unique "shrinking roll" principle.

Power	850	W
Max. width	1400	mm
	55	'
Speed	18	m/min
Max. diam. take-up	300	mm
Weight	195	kg
Dimensions(WxHxD)	1716 x 1174 x 800	mm
	67,6 x 46,2 x 31,5	'

- Constant regulated delamination speed; The rpm is automatically regulated depending on the diameter of the take-up cylinder
- "High speed" buttons for safe operation
- Automatic height adjustment of the take-up with the diameter
- Any panel thickness can be processed
- "Shrinking roll" take-up cylinder for fast and easy removal of material
- CE-certified
